

Caruso's Coffee Espresso Service Program

Caruso's Coffee is excited to announce that it has expanded its service department. We are pleased to introduce Dave Lepka to our service team. Dave brings to the department over 15 years of experience working on a wide range of commercial espresso machines, espresso grinders and brewing equipment. We believe that this addition will enhance our overall business and more importantly allow us to continue to provide our customers with the highest level of support and customer service our customers have come to expect.

KEY POINTS OF OUR PROGRAM:

Preventative Maintenance (PM)- A good preventative maintenance program on an espresso machine is essential. It increases the longevity of the machine and helps avoid costly repairs and downtime. Caruso's PM also includes the following, replacement of all common wear items, calibration of all temperatures and pressures, as well as checking the calibration of the espresso grinder.

Parts- Caruso's Coffee has built an extensive parts inventory that will encompass all major espresso brands. This will allow us to repair machines on site, which will reduce multiple trips and downtime.

Water Treatment- Caruso's service department has the ability to test the water and the ability to install the proper water filtration/softening system that best suits your location's needs. Superior water quality increases the overall longevity of the machine and more importantly increases the quality of the espresso that is being served.

For service rates, please contact Michael Caruso or one of our Service Team Members:
